The Costs of Incomplete Streets

Complete Streets Summit
October 22, 2010
Bloustein School, Rutgers University
“Being physically active is one of the most important steps that Americans of all ages can take to improve their health.”

Promoting healthy, active communities throughout New Jersey

A public/private partnership of over 100 organizations--and growing

Coordinated by the Office of Nutrition & Fitness, NJ DHSS

Partners include the NJ DOT and Voorhees Transportation Center!
How much PA do we need for health benefits?

**Adults:** 150 minutes/week of moderate-intensity PA OR 75 minutes/week of vigorous PA

- Moderate-intensity PA = brisk walking (you can talk while doing)
- Vigorous PA = running (you can’t really talk)

**Children:** 60 minutes *minimum*/day

Source: 2008 PA Guidelines
What are the human costs of not getting enough PA?

Higher risk of

• Early death
• Heart disease
• Stroke
• Obesity
• Type 2 Diabetes
• Breast Cancer
• Colon Cancer
• Depression

2008 PA Guidelines
What are the human costs not getting enough PA?

• In one health plan “nearly 12% of depression and anxiety and 31% of colon cancer, heart disease, osteoporosis and stroke cases were attributable to physical inactivity” (Am J Prev Med 2004:27 (4))

• Diabetes is the main cause of kidney failure, limb amputations and new onset blindness (Nat’l Institutes of Health)
In New Jersey, using obesity as a proxy...

- $2.342 billion for the total population
- $591 million for the Medicare population (65+ years of age)
- $630 million for the adult Medicaid population (very low-income individuals)

What are the economic costs of not getting enough PA?

**Nationally** (obesity as proxy)

- Obesity cost $78.5 billion in health care expenditures (1998 estimate)

*And that was a decade ago.....*

Source: http://www.cdc.gov.obesity/causes/economics.html
A team from Emory University projected out to 2018:

• If rises in obesity continue at current rates: all states except Colorado will have an adult obesity prevalence of over 30%!

• $344 billion in health care costs attributable to obesity, or 21% of direct health care spending...

= 4 times as much as current costs.

Given the costs, how active are people in New Jersey...
New Jersey adults are OK, not great..

NJ’s youngest have highest rates in the nation...

2009 Pediatric Obesity and Overweight Rates

Why is *ShapingNJ* so excited about Complete Streets?

- People will not become and stay physically active if they lack the opportunity to do so.
- We know we need to focus on adopting policies and creating environments that support healthier lifestyle choices.
- Complete Streets helps transform our communities into places where healthy lifestyle choices are *easily* incorporated into everyday life.

Complete Streets support 2 major ShapingNJ strategies:

- Increasing opportunities for engaging in physical activity.

- Making walking and biking *safe, easy* options for daily transportation.
